

Model : CP-24

CP-24 Lighting Console is designed for applications in small to medium sized TV studios. Due to its small footprint and light weight, CP-24 is the ideal choice of lighting engineers for stage applications. Its powerful software and reliable hardware makes this console a perfect device for light engineers and professionals for accurate jobs under harsh working conditions.

Features:

- Channels allocated as HTP or LTP for control of dimmers
- Quick programing and execution of commands
- Configurable as per requirements of the lighting engineer
- Instant activation of memory and chase feature

Technical Specification:

- Compatible with DMX512
- 512 channels
- 24 faders for direct control of channels
- Two DMX outputs (3-pin)
- Outputs isolated against electric shock
- Audio signal input port for sound activation
