

Model : I-MOT

I-MOT is a motorized trolley designed for moving drop arms with loads of up to 120 Kilograms on I shaped rails. The motion of the trolley is controlled via C-PCS front panel or via radio frequency remote controlled panel R-PCS.

The motor of the trolley is run by a 220 Volt / 50 Hz power signal and is capable of moving the trolley with a speed of 120 millimeters per second. Speed of the trolley is variable by adjusting the friction force between the wheels of the trolley and the rail.
