

Steering Axle

Levelling Legs

**Model : LHC-4-12**

Nowadays, cameramen use cranes both inside and outside studio environments in order to obtain spectacular shots from various angles. Besat Industrial Group manufactures specialized camera cranes in varying lengths. The length of LHC-4-12 ranges from 4.5 to 12 meters. The standard lengths are: 4.5, 6.0, 7.5, 9.0 and 12.0 meters. Assembly of the crane takes only 20 minutes for a trained personnel. Smooth and vibration-free movement of the crane in all directions is a major advantage of LHC-4-12. The Head of the crane is equipped with two special motors which are utilized for perfect Pan and Tilt movements. The Control Panel of the crane is used by the operator to adjust the Pan, Tilt, Zoom and Focus parameters of the camera.
