## Model : Chabok

Dolly model Chabok has been designed for the modern video and film industry with three main ideas in mind:

**Light Weight:** The platform of the Dolly is made of a special 15 layer wood with granulated metal cover. The light weight and strong material can support up to 200 Kilograms of weight.

**Small Size:** The main platform of the Dolly can be folded from the middle thanks to the special steel joints and connections. The Dolly can therefore be easily folded and in half and carried away. The Carrying Case and the associated standard tracking fit easily inside an automobile.

**Flexibility:** Three metal spacings have been integrated on the surface of the platform such that all types of camera tripods can be fitted on the Dolly.
